

Edwards Fogarty[®] Catheters

The only name in clot
management backed
by over 50 years of
worldwide experience.

Edwards

For over 50 years, clinicians have come to address the real problem of clot

The reason is simple. Through collaboration and clinical learning, Edwards Lifesciences has continued to evolve and advance its Fogarty catheters to meet the exacting needs of specialists for vascular procedures. Their proven performance and manufacturing quality has led surgeons to specify genuine Fogarty catheters – available exclusively from Edwards – for millions of procedures worldwide.

Fresh, soft emboli/thrombi

Fogarty arterial embolectomy catheter

Simple, rapid removal of soft, fresh emboli and thrombi from the arterial system

- Hand-tied using a recessed winding technique to secure balloon to catheter
- Balloon exhibits a symmetry that exerts uniform contact with vessel walls for even pressure and precise traction
- Soft, rounded tip promotes easy insertion for reduced trauma

Fogarty Fortis arterial embolectomy catheter

For more aggressive removal of emboli and thrombi from the arterial system

- Construction and materials designed to be more durable and withstand greater pull-force
- The addition of barium to the catheter shaft material provides radiopacity

Fresh, soft emboli/thrombi, temporary occlusion, infusion

Over-the-wire Fogarty thru-lumen embolectomy catheter

Multi-use, guidewire-compatible design enables removal of soft, fresh emboli and thrombi as well as fluid delivery, temporary occlusion, and blood sampling

- Tough, compliant Fogarty balloon conforms to the vessel to maximize clot removal while minimizing trauma
- Provides the solution for distal thrombus removal in the arterial system
- The addition of barium to the catheter shaft material and stainless steel markers proximal and distal to the balloon provide radiopacity

nted on real Fogarty® catheters management.

Mature, adherent thrombi

Fogarty Corkscrew catheter

Used to dislodge adherent material in native vessels and synthetic grafts

- For extracting thrombus that is too resistant for an elastomeric balloon
- Corkscrew design increases the surface area for entrapping fibrous material
- Radiopaque and flexible

Fogarty graft thrombectomy catheter

Designed for removing organized and adherent thrombus from synthetic grafts, such as aortofemoral grafts

- For thrombus that is too resistant for an elastomeric balloon
- Provides a larger diameter range than the Fogarty Corkscrew catheter
- The pulling force can be varied by adjusting the diameter

Venous thrombi

Fogarty venous thrombectomy catheter

Designed for removing thrombi in the venous system

- The long, soft tip facilitates advancement past the venous valves without undue trauma

Fogarty irrigation catheter *(not shown)*

Can be used to heparinize the arterial tree following embolectomy or venous thrombectomy

You'll want a real

Fogarty®

Fogarty® clot management catheters

Model	Usable length (cm)	Catheter Size (F)	Membrane/spiral diameter max. extended (mm)	Membrane/spiral diameter max. retracted (mm)
